

A New Idea In Air Conditioning

Every piece of equipment, indoors or outdoors, needs preventative maintenance. Dirt and debris are continually coating and insulating your outside air conditioning components that fall in the path of the equipment's airflow. Dirty equipment means efficiency decreases, systems are forced to run for longer cycle times at reduced capacity. The equipment eventually breaks down, life expectancy decreases and power costs escalate.

Permatron's PATENTED PreVent® Equipment Protection Filter is permanent/washable woven synthetic fabric, which draws in and traps airborne particulates.

You filter the air in the indoor system, now you can filter the air in the outside unit, too

Ask your Sun Kool Air Conditioning Service Technician how you can have Permatron's PreVent installed in your existing air conditioning system. Protect your investment.
